SUMMARY

DevOps Engineer with 3+ years of experience spanning Linux production support, AWS/GCP, Kubernetes, Terraform, CI/CD, GitOps, DevSecOps, and SRE practices. Hands-on experience operating 25+ microservices on Kubernetes, building deployment automation, troubleshooting production systems, and improving reliability and observability. Strong in AWS EKS, Terraform, Helm, GitLab CI/CD, Jenkins, Argo CD, FluxCD, Istio, Prometheus, Grafana, OpenTelemetry, Python, and Bash. Experienced with secure delivery, Kubernetes networking, progressive deployments, workload optimization, and cloud cost management.

CORE SKILLS

Cloud: AWS (EKS, EC2, VPC, S3, IAM, ECR, CloudWatch, Auto Scaling, RDS) ;—; GCP (GKE, Cloud Run, Compute Engine, Cloud Storage, Log Explorer)

Kubernetes: Kubernetes, EKS, GKE, Helm, RBAC, NetworkPolicies, Ingress, Gateway API, HTTPRoutes, CRDs, Secrets

DevOps: Terraform, Ansible, Jenkins, GitLab CI/CD, GitHub Actions, Groovy, Argo CD, FluxCD, Docker, Kaniko

SRE: Prometheus, Grafana, kube-prom-stack, OpenTelemetry, Jaeger, Alertmanager, ELK, monitoring, alerting, incident response

Security: Cosign, Kyverno, SAST, DAST, vulnerability scanning, least privilege, mTLS, WAF, workload security

Reliability: Istio, canary, blue-green, traffic routing, autoscaling, Karpenter, KEDA, Spot Instances, Kubecost, rightsizing

Systems: Linux, Ubuntu, RHEL, AlmaLinux, TCPDUMP, DNS, firewalls, VPNs, SSL, Python, Bash, Shell

PROFESSIONAL EXPERIENCE

DevOps Engineer Feb 2026 – Present *WebReinvent Technologies Pvt Ltd.*

- Operate and support a Kubernetes-based eCommerce platform with **25+ microservices**, focusing on reliability, deployment automation, troubleshooting, and performance.
- Implement GitOps deployment workflows using **FluxCD**, Helm, and Kubernetes; support controlled application releases and configuration management.
- Troubleshoot Kubernetes workloads using logs, metrics, CRDs, finalizers, resource utilization, and cluster-level diagnostics; optimize resource requests and limits to improve workload performance.
- Build and maintain **GitLab CI/CD** pipelines and resolve complex failures involving concurrent executions, deployment sequencing, and automation workflows.
- Implement Kubernetes security controls including **RBAC, IAM access controls, NetworkPolicies, secure secrets, and DevSecOps practices**.
- Develop Helm-based authentication integrations for enterprise applications using **SAML and LDAP**.
- Support application migration activities, production deployments, incident troubleshooting, and remediation in collaboration with development and infrastructure teams.
- Maintain operational SOPs and troubleshooting documentation in Confluence.

DevOps Engineer – Training and Projects May 2025 – Feb 2026 *Skillfyme*

- Built CI/CD pipelines using **Jenkins, GitLab CI/CD, and GitHub Actions** for automated builds, testing, security validation, and Kubernetes deployments.
- Provisioned AWS infrastructure using **Terraform** and Ansible, applying reusable modules, remote state, and configuration management practices.
- Containerized applications with Docker and deployed workloads to Kubernetes using Helm, implementing **Argo CD and FluxCD** for GitOps delivery.
- Implemented Kubernetes networking and progressive delivery using **Ingress, Gateway API, HTTPRoutes, canary, blue-green deployments, and traffic routing**.
- Implemented **Istio service mesh and mTLS** for secure service-to-service communication and traffic management.
- Integrated DevSecOps controls including **SAST, DAST, Cosign image signing, Kyverno policy enforcement, vulnerability scanning, and least-privilege access**.
- Built observability using **Prometheus, Grafana, OpenTelemetry, Jaeger, Alertmanager, and ELK**, with OTEL receivers, processors, and exporters.
- Applied Kubernetes reliability and cost optimization using **Karpenter, KEDA, Kubecost, autoscaling, Spot In-**

stances, rightsizing, and granular resource sizing.
- Automated operational tasks and troubleshooting workflows using **Python and Bash**.

Senior Technical Support Engineer (L2) May 2024 – May 2025 *Adobe – Third Party Payroll*
- Managed Linux-based production systems supporting enterprise users with high SLA compliance across application, OS, and infrastructure layers.
- Troubleshoot **Linux, networking, deployments, application failures, and performance issues**; performed RCA and production remediation of SaaS applications.
- Administered patching, upgrades, configuration changes, and system diagnostics across multi-environment applications.
- Used SSH, logs, system diagnostics, and network troubleshooting to investigate incidents and provide actionable findings to development teams.
- Maintained technical documentation and operational procedures while collaborating with engineering teams through Jira and internal support platforms.

Senior Technical Representative Nov 2022 – Dec 2023 *WNS Global Services*
- Supported SAP HANA and Salesforce environments with backend Linux troubleshooting, production incident response, and secure remote access management.
- Connected to remote Linux servers via SSH to perform system diagnostics, connectivity testing, service validation, and application-level troubleshooting.
- Collected and analyzed system, application, and service logs to isolate production issues and support root cause analysis (RCA).
- Managed incident and service requests through **Jira**, maintaining accurate troubleshooting notes, evidence, status updates, and resolution details.
- Collaborated with development, application, and infrastructure teams in an **Agile** environment to validate fixes, coordinate remediation, and resolve production incidents.
- Performed structured incident triage, testing, log collection, escalation, and follow-up while maintaining SLA compliance and operational documentation.

SELECTED PROJECTS

Secure Kubernetes Platform: Built a GitOps-driven Kubernetes platform using Helm, Argo CD, FluxCD, RBAC, NetworkPolicies, Kyverno, Cosign, secure secrets, Istio, and mTLS.

DevSecOps CI/CD: Built Jenkins and GitLab CI/CD workflows integrating container builds, security scanning, SAST/DAST, image signing, policy enforcement, and Kubernetes deployment gates.

AWS Infrastructure Automation: Developed reusable Terraform modules for multi-environment AWS infrastructure with remote state and automated configuration management.

Kubernetes Observability and FinOps: Implemented OpenTelemetry, Prometheus, Grafana, and Jaeger observability alongside Karpenter, Kubecost, KEDA, autoscaling, Spot Instances, and rightsizing practices.

CERTIFICATIONS

- AWS Certified DevOps Engineer – Associate
- GCP Certified DevOps Engineer – Associate
- Certified Kubernetes Administrator (CKA)
- HashiCorp Terraform Associate
- Docker Certified Associate
- Jenkins Fundamentals
- *Pursuing: CKS and RHCSA*

EDUCATION

Bachelor of Technology – Mechanical Engineering 2018 – 2022 Shri Govindram Seksaria Institute of Science and Technology
