Professional Summary

1. DevOps Engineer with hands-on experience in Kubernetes, Docker, Terraform, and CI/CD, along with 2+ years of Linux production support experience in enterprise environments. Completed an intensive DevOps with AI program and built end-to-end cloud-native deployment solutions using GitOps, infrastructure automation, and monitoring. Certified in AWS, Kubernetes, and Terraform, with strong expertise in Linux administration, troubleshooting, and production reliability.

Certifications

- AWS Certified DevOps Engineer – Professional
- Certified Kubernetes Administrator (CKA)
- HashiCorp Terraform Associate
- Docker Certified Associate
- Jenkins Fundamentals
- Pursuing: Kubernetes Security Specialist (CKS), Red Hat Certification

Technical Skills

Cloud Platforms: AWS (EC2, S3, IAM, VPC, EKS, CloudWatch), Azure (AKS, VM, Storage, Networking)
Containerization & Orchestration: Docker, Kubernetes, Helm, EKS, AKS
CI/CD & GitOps: Jenkins, GitHub Actions, GitLab CI/CD, Argo CD, FluxCD
Infrastructure as Code: Terraform, AWS CloudFormation, Ansible
Monitoring & Observability: Prometheus, Grafana, ELK Stack, Alertmanager, Jaeger
DevSecOps: SAST/SCA integration, container image scanning, security gates, RBAC, Network Policies
Deployment Strategies: Blue-Green, Canary deployments
Service Mesh: Istio (mTLS, traffic management)
Scripting: Bash, Python
Operating Systems: Linux (Ubuntu, CentOS, RHEL)

DevOps Training & Hands-on Projects

DevOps Engineer – Training & Projects
Skillfyme | May 2025 – Present

- Completed an industry-focused DevOps with AI program covering Kubernetes, Docker, Terraform, AWS, Azure, and CI/CD automation

- Built end-to-end CI/CD pipelines using Jenkins, GitHub Actions, and GitLab CI/CD for automated build, test, and deployment
- Containerized applications using Docker and deployed them to Kubernetes clusters using Helm charts
- Implemented GitOps-based deployment using Argo CD and FluxCD to enable version-controlled infrastructure and application delivery
- Provisioned cloud infrastructure (VPC, EC2, IAM, EKS) using Terraform with modular design and remote state management
- Configured Kubernetes security controls including RBAC, Network Policies, Secrets management, and Pod Security Standards
- Implemented monitoring and alerting using Prometheus, Grafana, and centralized logging using ELK Stack
- Designed deployment strategies including Blue-Green and Canary releases for zero-downtime deployments
- Worked with Istio service mesh for secure service-to-service communication using mTLS
- Implemented DevSecOps practices including image scanning, dependency scanning, and CI/CD security gates
- Explored AI-driven monitoring concepts for anomaly detection and incident analysis

Professional Experience

Senior Technical Support Engineer (L2)
Adobe (Payroll: Third Party) | May 2024 – May 2025

- Provided L2/L3 support for Linux-based production environments serving global enterprise users
- Troubleshot OS, network, access, and deployment-related issues to ensure high system availability
- Performed root cause analysis (RCA) for infrastructure and configuration issues impacting applications
- Managed patching, upgrades, and security updates for Ubuntu-based systems
- Supported application deployments and environment configuration across multiple environments
- Maintained SLA compliance above 99% in a high-availability production environment

Senior Technical Representative
WNS Global Services | Nov 2022 – Dec 2023

- Supported enterprise platforms including SAP HANA and Salesforce with backend Linux troubleshooting
- Performed system diagnostics using SSH and command-line tools to identify performance and access issues
- Assisted infrastructure teams during incident response and remediation activities
- Reduced issue resolution time through effective troubleshooting and coordination

Key Projects

Secure Kubernetes Platform (GitOps)

- Built a Kubernetes environment with Helm-based deployments and Argo CD
- Implemented RBAC, Network Policies, and secure secrets management

CI/CD Automation Pipeline

- Designed a Jenkins pipeline to build Docker images, scan for vulnerabilities, and deploy to Kubernetes

Terraform Infrastructure Automation

- Created reusable Terraform modules to provision multi-environment AWS infrastructure with remote state management

Education

Bachelor of Technology – Mechanical Engineering
Shri Govindram Seksaria Institute of Science and Technology | 2018 – 2022

Key Strengths

- Strong Linux and production troubleshooting background
- Hands-on experience with cloud-native DevOps tools
- GitOps-first approach to deployments
- Experience working in high-availability enterprise environments
- Quick learner with strong problem-solving and automation mindset
